Providing embedded software development, test tools and solutions to the wireless telecom industry

Celwave/Ericsson RBS 500HP Racks

These AMP cellular systems were developed and sold by Ericsson for rural areas where greater range compensated for low subscriber density. All components are New Old Stock, generally in original packing. Most of the major components were manufactured by Celwave for Ericsson, who assembled the racks at their Plano, TX factory. The rack assemblies do not include transceivers but otherwise include the complete RF chain and supporting equipment. The systems could be retuned to operate on adjacent frequencies if desired.

[Want it now? Visit our eBay store](#)

DC strip	545360	DC distribution panel	2 each
LNA power distribution panel	737560	Power supply for 737570	1 each
Combiner	745510	4-channel combiner	1 each
PMU	507590	Power Measuring Unit	1 each
CCRS	642260	Control Channel Redundancy Switch	1 each
5192-25L	745280	TX Channel filter	1 each
PR894A	640800	175 W PA	4 each
Amplifier mounting tray	545390	Mounting tray for 640800	2 each
Amplifier power tray	507580	Power tray for 640800	1 each
Rack		19" X 7' rack	1 each

Though the four PR894A PAs are not shown in the photo above they are included.
