

We'd like to introduce you to the **Dearborn Foundation Scholarship**, started by Howard K. Dearborn (1918-2013), a successful engineer, inventor and entrepreneur in Fryeburg, ME. The scholarship is awarded each year to undergraduate students in two categories of study; the first being engineering (chemical, electrical, mechanical) and physics, and the second being precision machining. The Foundation considers individuals who are excellent students and independent thinkers; inventors, innovators and entrepreneurs. If this description applies to you, consult [www.dearbornfoundation.com](http://www.dearbornfoundation.com) for information. Application materials are available on the website and must be submitted no later than January 20, 2023. The application process will take some time and the selection process is highly competitive; interested students should review application requirements as soon as possible at the beginning of the school year. Should a freshman be awarded a scholarship for sophomore year, and maintain a 3.0 GPA, he/she will be eligible for scholarships for both junior and senior years. For more information, contact Suzanne Tolleson at [info@dearbornfoundation.com](mailto:info@dearbornfoundation.com)
